

AJAY REPAKA

Agentic AI Engineer | LangGraph | RAG | MCP | FastAPI | Python

Hyderabad, India | jayajay2754@gmail.com | +91-9553511640 | linkedin.com/in/repakaajay | github.com/repakaajay

PROFESSIONAL SUMMARY

Agentic AI / LLM Engineer with hands-on experience designing multimodal agentic ai, tool-using, multi-step AI agents using LangChain, LangGraph, and the Model Context Protocol (MCP). Comfortable working across the agent stack: planning, memory, tool/function calling, FastAPI backends, and RAG pipelines with vector search. Actively building and testing agent projects end-to-end, and studying agent evaluation, observability, and multi-agent orchestration practices used in production systems.

TECHNICAL SKILLS

Agent Frameworks & Protocols: LangGraph, LangChain, Model Context Protocol (MCP), Tool/Function Calling, Agent Planning, Memory, Reflection, Multi-Step Reasoning, Multi-Agent Orchestration, Agent Evaluation (LangSmith), CrewAI, OpenAI Agents SDK.

LLM APIs: OpenAI Responses API, Anthropic Claude API, Google Gemini API

RAG & Retrieval: Retrieval-Augmented Generation, Embeddings, ChromaDB, Vector Search, Document Chunking

Backend Development: Python, FastAPI, REST APIs, Pydantic, Async I/O

Databases: PostgreSQL (basics), SQLite

DevOps & Cloud: Docker, Kubernetes (basics), Render, Railway, AWS (basics), Git/GitHub

PROJECTS

RAG-Based PDF Knowledge Assistant | Python, ChromaDB, OpenAI Embeddings

Designing a Retrieval-Augmented Generation pipeline that lets users query PDF content in natural language. Implementing document chunking, embedding generation, and vector storage in ChromaDB for semantic search.

Building a retrieval layer that grounds LLM responses in source documents to reduce hallucination.

Autonomous Task-Planning Agent | Python, LangGraph, LangChain

Developing a stateful agent in LangGraph that plans multi-step tasks and selects tools based on context. Implementing agent state management and a reflection step where the agent reviews and revises its own output.

Studying workflow orchestration patterns for chaining multiple reasoning steps reliably.

MCP Tool-Orchestration Assistant | Python, Model Context Protocol (MCP)

Building an assistant that connects to GitHub, Gmail, and filesystem tools through MCP servers.

Implementing protocol-based communication between the agent and external tools.

Learning dynamic tool discovery so the agent can route requests without hardcoded logic.

Conversational AI Backend | Python, FastAPI, OpenAI Responses API

Developing a FastAPI backend exposing REST endpoints for conversational interactions.

Implementing streaming responses and persistent chat history for multi-turn conversations.

EDUCATION

Bachelor of Technology (B.Tech) in Cybersecurity

Malla Reddy Engineering College, Malla Reddy University, Hyderabad — June 2025
